INSTRUCTIONS FOR USE

1. Use with SkyJack SD-M, SD-L, or SD-XL adjustable pedestals. Keep the pedestal head accessible for the tool.
2. Insert the tool shank into the drill chuck and tighten securely. Use a low clutch setting to protect the plastic tool from excessive torque.
3. Align all four protruding pins with the matching holes in the pedestal head. Lower the tool until the pins are fully seated.
4. Operate the drill gently to rotate the pedestal adjustment mechanism until the required height is reached. Do not force the tool.
5. Stop the drill before lifting the tool out of the head. Check the finished height, level and stability of the pedestal.
